

Full Screen Image Showing User Interface and 8.5W Embryo

MODULE 3 - PELVIC

Pelvic Ultrasound - is the third Module in our Emergency Medicine Series.

This Module consists of 1 CD containing 31 transabdominal and transvaginal OB/GYN cases.

The Pelvic Module demonstrates a wide range of normal obstetrical and gynecological examples as well as numerous pathologies.

Pelvic Module CD

Interactive learning features allow the user access to a wide range of educational material including performance tasks, case material containing images and clinical data.

Requires both Curved and Transvaginal Mock Transducers

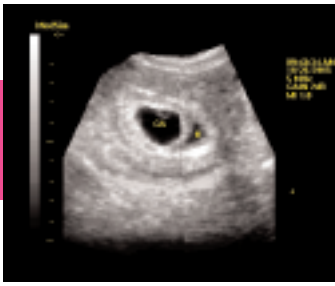

Case content includes multiple gestation, impending embryonic demise, spontaneous abortion, hemorrhage, retained products of conception, benign tumors and carcinoma among other pathologies.

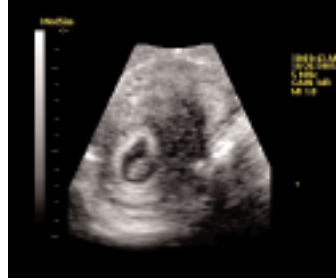

Requires Full Torso Mannequin

EMERGENCY MEDICINE SERIES
